Here's what happened to that rocket target in an April 2013 demo of the Lockheed Martin ADAM laser system.

The Afloat Forward Staging Base (Interim) USS Ponce (ASB-15) conducts an operational demonstration in the Persian Gulf.

Active Denial System (ADS)

### **A. High Energy Laser**

"In a series of tests, the prototype ADAM system destroys a number of targets that the defense contractor describes as "free-flying Qassam-like rockets." ["Lockheed laser weapon hits its mark again", Jon Skillings, CNET 8 May 2013](#)

### **B. USS Ponce**

"The 30-kilowatt laser is capable of destroying targets on speeding boats or even aircraft with pin-point accuracy, officials have said."

["US navy shows off ship-based laser weapon in Persian Gulf", Nicky Woolf, Guardian, 10 Dec 2014.](#)

### **C. High Frequency Active Auroral Research Program (HAARP)**

a. "HAARP will zap the upper atmosphere with a focused and steerable electromagnetic beam. It is an advanced model of an "ionospheric heater." (The ionosphere is the electrically-charged sphere surrounding Earth's upper atmosphere. It ranges between 40 to 60 miles above the surface of the Earth.)"

"Put simply, the apparatus for HAARP is a reversal of a radio telescope; antenna send out signals instead of receiving. HAARP is the test run for a super-powerful radiowave-beaming technology that lifts areas of the ionosphere by focusing a beam and heating those areas. Electromagnetic waves then bounce back onto earth and penetrate everything -- living and dead."

"HAARP publicity gives the impression that the High-frequency Active Auroral

Research Program is mainly an academic project with the goal of changing the ionosphere to improve communications for our own good. However, other U.S. military documents put it more clearly -- HAARP aims to learn how to "exploit the ionosphere for Department of Defense purposes." Communicating with submarines is only one of those purposes."

["The Military's Pandora's Box ", Dr. Nick Begich and Jeane Manning, harp.net](#)

b. "Disturbing evidence is emerging that HAARP has been weaponized. Noted Brazilian physicist, Dr. Fran De Aquino, recently asserted the fully functional HAARP network is not only modifying weather and geophysical events, it may also be warping space and gravity—even time! Now applications of Nikola Tesla's legendary "Death Ray" weapon may have been activated."

"HAARP's high frequency radiowaves that can be intensified, modulated and directed to almost any place on Earth, are built upon some of the most advanced work of the legendary inventor and visionary, Nikola Tesla." ["HAARP Unleashes Tesla Death Ray", Terrence Aym, Beforeitsnews.com, 25 Nov 2012.](#)

**C. Second Photo:** "The US Navy is reportedly deploying the huge Sea-based X-band radar to the Korean Peninsula what suggests that North

Korea could be hit by a massive HAARP-made earthquake anytime soon”.

“The Sea-Based X-Band Radar (SBX-1) is a floating, self-propelled, mobile active electronically scanned array radar station designed to operate in high winds and heavy seas. It is part of the U.S. Defense Department Ballistic Missile Defense System.”

[“Sea-based X-band Radar”, Wikipedia.](#)

#### **D. Active Denial System**

“Despite decades of effort and tens of millions of dollars, the US has yet to field a non-lethal “pain” weapon. Here’s why.”

“It was a decision that was bound to attract its fair share of controversy. In 2010, the Los Angeles County Sheriff’s Department held a press conference to announce plans to start using a new nonlethal weapon that shoots an invisible energy beam. The weapon uses extremely short radio waves - called millimeter waves - to heat the top layer of skin, which causes an intense burning sensation.”

“The device, which was developed over a decade ago as part of a once-classified military project, causes searing pain, but no actual physical

damage to its human targets. The police there planned to use it in one of their jails to help control inmates, particularly in case of fights.”

“We were interested in that because, it’s almost like, if it worked, it would be the holy grail for police: a device that might provide pain compliance [for prisoners] without hurting them,” says Commander Robert Osborne.

“Everything else that causes pain actually hurts them.”

“Indeed, it seemed like the perfect weapon: unlike a Taser, which has a limited range and can only be used against one person at a time, this was more like a science fiction phaser, shooting out a beam that could strike and repel multiple people quickly and from relatively great distances.”

[“US military heat-ray: Set phasers to... none”, Sharon Weinberger, BBC Future, 19 July 2012](#)
